

# Operational Team Performance Lab

The Operational Team Performance Lab is an immersive, simulation-based workshop built for engineering, shipyard, and production teams operating in high-stakes environments. Designed to reinforce real-time decision-making, coordination, and leadership under pressure, this program challenges small teams to solve a series of construction-based operational tasks with limited resources and tight timelines.

Each team is led by a designated Team Leader who manages execution and coordinates with other teams to help reach a collective organizational goal. This structure strengthens both team-level performance and enterprise-wide alignment.

Participants gain hands-on experience in:

- **Operational Communication**
- **Cross-Functional Collaboration**
- **Resource and Process Management**
- **Shared Accountability**
- **Stress-Resilient Execution**

The program concludes with a facilitated debrief that links performance to practical takeaways. Ideal for government teams seeking to operate as one coordinated, adaptive unit.

## Delivery Options:

- **Duration: 3 hours (includes debrief)**
- **Group Size: 30 - 80 participants**
- **Delivered on-site or at an approved training location**
- **Facilitated by consultants with active government security clearances**
